

Advisora - 6 Modules Overview

Generated on May 15, 2026. Concise summary of implemented major functionalities.

1) Strategies Module

This module manages strategic planning linked to projects, from creation to validation and strategic execution follow-up.

- Back-office strategy CRUD with filters (search, status, type), sorting, and pagination.
- SWOT matrix management (create/edit/delete and bulk item insert).
- Objective management, including TOWS objective creation and AI-assisted objective generation.
- Risk-based automatic status rules (pending/in-progress) and lock timestamp sync after approval.
- Decision workflow for admin/client actions (approve/reject paths).
- Strategy PDF generation and project recommendation flow with auto-generate options.

2) Users Module

This module handles user administration, profile management, and secure authentication flows.

- Back-office user listing with search and sorting.
- User create/edit/delete with role-based usage, CSRF checks, and password hashing.
- Profile update with user image upload and replacement handling.
- Authentication features: login, register, logout, forgot password, and reset password.
- OTP verification flow (verify, resend, cancel) for stronger login security.
- Google OAuth entry/check and dedicated client profile views.

3) Projects Module

This module manages project lifecycle, operational tasks, and decision tracking between client and back office.

- Front and back project listings with filters, status views, and dashboard insights.
- Project CRUD with permission rules by role and ownership.
- Decision history/versioning and automatic mapping from decision state to project status.
- Task board operations (add/edit/delete/move) with role-aware permissions.
- Decision feed endpoint and project voice-message support integration.
- Project dashboard PDF export and notification hooks for key events.

4) Events Module

This module covers event publishing and end-to-end booking management for clients and managers.

- Event catalog with search filters and client-facing recommendations.
- Calendar JSON endpoint for event scheduling display.
- Back-office event CRUD for admin/manager roles.
- Client booking flow (create/edit/delete) with capacity checks and duplicate-booking guard.
- Booking workflow states (pending/accepted/refused) managed in back office.
- Client bookings list and PDF export of booking history.

5) Investment Module

This module manages client investments linked to projects, including decision support and historical reporting.

- Client investment listing with filters and yearly chart aggregation.
- Investment creation (general or project-prefilled) with form validation and normalization.
- AI/analytics support for top project recommendations and per-investment prediction.
- Manage/edit/delete flows with lock rules when transactions are already processed.
- Back-office visibility for all investments and detailed management view.
- Investment history pagination and PDF export generation.

6) Ressources Module

This module manages resource inventory, reservations, and advanced operational analysis for back office.

- Front and back resource catalogs with filtering and role-based access controls.
- Back-office resource dashboard with metrics and chart visualizations.
- Resource CRUD with normalization and dependency checks before deletion.
- Reservation workflows for clients and back office (create/edit/delete).
- Stock availability tracking (reserved vs available) per resource.
- Resource analysis engine with async run, filtered results, CSV/PDF exports, and analysis chat.
